CONTENTS

	Page
A Graphical Method of Solving Empirically Related Dimensionless Parameters, with an Application to Pipe-Line Flow — Arvid E. Roach	1
Operations Research — Arthur A. Brown	6
An Introduction to High-Speed Digital Computation — Walter F. Bauer	13
Energy Approach to Stress Problems — Clayton Pajot	23
The Effect of Slicing on Residual Stresses in Plates — Leonard G. Johnson	42
The IBM Card-Programmed Electronic Calculator — Justus Chancellor III	51
Application of the CPC to Automotive Engineering Problems — Fred F. Timpner	57
Bending of a Circular Plate with Eccentric Hole — Samuel D. Conte	62
Construction and Use of Nomographic Charts — L. S. Johnston	69
Components of Digital Computers — E. Calvin Johnson	92
Matrix Iteration Method for Calculating Critical Frequencies of Vibratory System in Bending — George Sonnemann	104
Frequency Response Analysis of Feedback Control Systems — Charles A. Piper	113
Simplification of Contact Geometry for Spiral Gear Load Calculation — Werner F. Vogel and Douglas Hughson	122
